EDUCATION

B.Tech + M.Tech (Information Technology), IIIT Gwalior
CGPA: 7.7/10

July 2016 - May 2021

EXPERIENCE

Senior Software Engineer
Ping Identity

Sept 2024 - Current
Bangalore, India

- Redesigned and optimized provisioning flow for dynamic group filters in Slack and GitHub by implementing bulk support, reducing sync time from 42 hours to 42 minutes for 100K memberships
- Led the design and implementation of inbound group provisioning in PingOne, enabling secure and scalable synchronization of groups and memberships from external directories.
- Delivered customer-driven feature allowing optional required attributes during updates, reducing configuration effort and improving usability across multiple targets.
- Led enhancement to make required attributes optional during update operations, increasing provisioning flexibility and simplifying integration for customers.
- Tech stack: **Java, SpringBoot, Python, Kafka**

Backend Engineer
PayPay Corporation

April 2023 - Sept 2024
Gurgaon, India

- Architected and led a microservices lottery platform handling 7 TPS, driving ₹320 M in pilot revenue. Leveraged Kafka for event streaming and built for scalability, high availability, and fault tolerance.
- Designed and implemented a comprehensive ledger system to track the lifecycle of gift vouchers, providing accounting teams with detailed data for managing an annual revenue of 500 million yen.
- Architected and deployed an email/push notification service seamlessly integrated with voucher expiration processes. This proactive engagement strategy significantly boosted user interaction and contributed to a monthly revenue increase of 500,000 Yen.
- Automated post-payment voucher expirations via Spring Batch jobs, reducing manual effort by 100% and slashing expiration-processing latency by 80%.
- Tech stack: **Java, SpringBoot, Python, Kafka**

Software Engineer 2
Sandvine Technologies

June 2021 - April 2023
Bangalore, India

- Enhanced Custom database feature by using intelligence feeds services to create baseline and deltas which improves the CPU and memory consumption by 13%
- Built extensive unit test coverage by writing more than 500 lines of code which reduced number of customer complaints by 23% and increased it to 93.2%
- Lead a team of 3 developers and launched High Availability distributed system across servers and end users which improves the CPU load on the production servers by 30%
- Tech stack: **Java, SpringBoot, Python, C++, Kafka**

SKILLS

Programming

Data Structures and Algorithms, System Design, C++, Java, Python

Frameworks and libraries

Spring Boot, Kafka

Tools

NewRelic, Victoria, Git
